**A2iA Named as a ‘KMWorld 2007 Company to Watch’ and as
Finalist for KM Magazine’s KM Promise Award**

*KM Promise Award Given to an Organization that Provides Innovative Technology Solutions
and Helps Organizations Realize Positive Business Results*

NEW YORK, Oct. 31, 2007 – A2iA, a leading provider of tools for document analysis and handwritten data extraction, announced today they have been named as a ‘KMWorld 2007 Company to Watch’, and recognized for a second year in a row as a finalist for the prestigious KM Magazine’s *KM Promise Award*. Each year, KM Magazine recognizes an organization that goes beyond simply delivering technology, but works with its customers to ensure the technology and knowledge processes are embedded so that the client realizes positive business results.

“We are honored to receive this award for the second year in a row and appreciate KM Magazine’s recognition of our innovative technology and customer focus,” said Jean-Louis Fages, A2iA’s Chairman of the Board and CEO.

With the majority of today’s data being stored in unstructured documents, A2iA provides the ability to retrieve information that would normally not be accessible through traditional OCR and ICR software. By adding the ability to read entire words and phrases from natural freeform handwriting, the A2iA toolkits extend a computer’s ability to capture and extract information with their Intelligent Word Recognition (IWR) engines.

About A2iA

A2iA, Artificial Intelligence and Image Analysis, is a software company that operates one of the world’s largest research centers focusing on ways to extract information from everyday paper documents that contain handwritten information. A2iA’s Document Classification, OCR, ICR and IWR technologies have been reducing data-entry costs and improving business process automation for over 16 years. A2iA recognition engines can be used to enhance the forms-processing, transaction-processing, content management, document management, and knowledge management systems from leading vendors.
