

A2iA Healthcare Data Management

Streamlined workflows. Tangible results. Miles ahead of the competition.

■ What's your competitive advantage?

We're paving the way for a completely new landscape. The healthcare industry is changing rapidly. But despite the push towards electronic data, a hybrid workflow is still very common. In fact, a recent study found that 48% of providers will continue to use paper records alongside their electronic solution for 1-3 years. Some even forecast they will use a hybrid system for as long as 5 years.

So what's one to do with the paper? Our software is **proven** to help bridge this transition, turning paper documents into **searchable**, electronic data and then **automatically routing** the information to the correct workflow.

■ Complex data extraction and intelligent indexing engines. And yes, we can read a physician's handwriting!

Clinical documentation, patient charts, diagnostic notes, lab requisitions, administrative forms, EOBs, checks / payments, HCFA / UB forms. No problem. A2iA's unique technology allows you to automatically locate, lift **AND** index data from both printed **AND** cursive handwritten documents.

Let us show you. Reduce manual document handling, overhead, and costs. Speed processing times. Streamline your workflow. See a visible ROI.

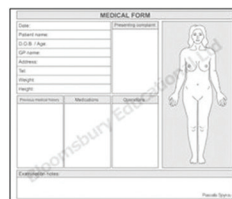

- **Speed** coding and save money, even with ICD-10.
- **Streamline** CAC solutions.
- **Obtain** meaningful use.
- **Reduce** the number of clicks.
- **Auto-populate** EMR, EHR, PM solutions.
- **Ensure** patient privacy.
- **Capture** EOB data with 'the click of a mouse.'
- **Process** complex claims fast.
