***A2iA Recognition Technology Provides Access to
Millions of France's Military Records***

*French Minister of Defense Entrusts EURIWARE and A2iA with the Modernization of its
Electronic Document Management System for Military Records.*

NEW YORK and PARIS, FRANCE, Oct. 2, 2008 – A2iA, a leading provider of tools for document analysis and handwritten data extraction, has been selected as part of a complete solution that will provide access to millions of France's military records. Within the Ministry of the Defense, the Direction of the National Service (DSN), the department that manages French citizens' military duty, currently maintains and administers 29 million files of individual records, which must be retained by the head office of military records (BCAAM) in Pau, France, through the end of 2012. In order to respond to increasing requests from citizens, the DSN must modernize its current Electronic Document Management (EDM) System.

This new system, designed by EURIWARE, incorporates A2iA's recognition technology and is capable of automatically handling the 1000 to 1200 letters received every day (requests for military service certificates, copies of administrative documents, diplomas, citations, etc.). This system will also accelerate the digitization of documents maintained by the BCAAM.

With this project, EURIWARE is committing to design the technical architecture, draft the specifications, and then to perform the installation, integration and configuration of the EDM application. This solution will utilize technologies designed by French developers: SESIN for the EDM (Poséidon) and workflow (Hermés) applications, and A2iA for the handwriting character recognition engine (A2iAFieldReader™). EURIWARE will also supervise all of the project management, including the maintenance phases.

The project started in early March 2008 and the new version of the application will be operational at the BCAAM in January 2009.

About A2iA

A2iA, Artificial Intelligence and Image Analysis, is a software company that operates one of the world's largest research centers focusing on ways to extract information from everyday paper documents that contain handwritten information. A2iA's Document Classification, OCR, ICR and IWR technologies have been reducing data-entry costs and improving business process

automation for over 17 years. A2iA recognition engines can be used to enhance the forms-processing, transaction-processing, content management, document management, and knowledge management systems from leading vendors. For more information: +1 (917) 237-0390.

About EURIWARE

EURIWARE provides its customers with advanced Consulting and IT services in the energy, industry, defense and services sectors. Its expertise is based on the successful combination of its three core business activities: consultancy, systems integration (enterprise systems integration and technical and industrial systems) and 'evolutionary' outsourcing. EURIWARE's industrial approach delivers successful projects, harnesses innovation and ensures continuous forward planning. EURIWARE employs 2,250 people. EURIWARE is a 100%-owned subsidiary of the AREVA group, experts in the energy sector. For more information, please visit: www.euriware.com and www.areva.com
