## Accelerating Claims Processing and Accuracy

A2iA's intelligent recognition toolkits are unmatched in their ability to quickly and accurately locate, extract and classify data. For insurance providers, the keys to maximizing profitability and customer satisfaction share a common drive – the ability to quickly aggregate data, correctly code and classify that information, and then take the appropriate action and respond to customers based on that business intelligence. A2iA helps its insurance customers compress the time between claim submission and provider response, often found with manual tasks, by accelerating document management workflows and aiding claims adjudication.

## All the Data You Need In a Searchable, Usable Format

### Locate & Extract All Data: Forms, Documents, Payments

- Locate and capture machine print through complex, cursive handwriting: alpha, numeric, and alpha-numeric data.
- Enhance privacy and eliminate manual document handling.
- Facilitate automatic reconciliation of payments by matching user-defined fields with documents such as change of beneficiary forms or policyholder documents.

### High-Level, Advanced Classification

- Eliminate the risk of human-error and increase processing speeds, regardless of volume or complexity.
- Automatically route documents and incoming workflows based on both layout and content, utilizing A2iA's unique holistic, transaction-level methodology: Each document is analyzed individually, as well as in relation to the others: a subject-matter is determined based on layout and content and then routed to the appropriate department or workflow.

## Reducing Costs and Expediting More Profitable Decisions

Insurance forms, documents and payments come in all types, sizes and formats. By helping to turn these critical data sources into fully searchable, readily accessible digital files, A2iA is proven to simplify processes and increase accuracy regardless of data-type, and independent of your area of focus: property and casualty, life and annuities, or health insurance. With improved speed and accuracy of insurance document automation and claims processing, A2iA customers reduce the costs of their everyday operations associated with manual tasks and adjudication. More timely responses and more correct "first pass" classifications reduce bottlenecks and improve execution on reconciliations across the enterprise.
