## **A2iA Launches *A2iA Mobility*<sup>™</sup>: Next-Generation Mobile Software, Streamlining Mobile Data Recognition**

*A2iA's patent-pending software toolkit boasts a Global footprint and more seamless user experience.*

**Paris / New York, February 25, 2013** – A2iA ([@A2iA](#)), a trusted name in the Worldwide data capture, document processing, and payment systems markets, unveiled today its newest software toolkit, *A2iA Mobility*<sup>™</sup>, bringing about next-generation capabilities for mobile data recognition. With a Global footprint and available for integration into a variety of mobile applications, including mobile remote deposit capture / check deposit, *A2iA Mobility* is available for Android and soon iOS platforms, and performs all image capture, cleanup (image quality analysis, IQA / image usability analysis, IUA) and data extraction directly on the smart phone or tablet -- no server connection is required, delivering an immediate confirmation of the data extracted and uncovering new opportunities for users looking to capture information in remote locations.

“*A2iA Mobility* is a powerful tool that will enable our partners to apply the same proven capabilities of our traditional software to a new generation of mobile applications, unlocking new opportunities for field agents, as well as financial institutions looking to offer a simpler user experience to their customers,” said Jean-Louis Fages, A2iA President and Chairman of the Board. “By performing all processes on the local device, *A2iA Mobility* delivers capabilities for real-time business operations.”

Applicable to various document types including checks, identification documents and other forms and documents, *A2iA Mobility* is an API, customizable within the host application and changing the way mobile data recognition takes place with a more seamless user experience. Users receive immediate confirmation that all identified data-points have been accurately captured prior to sending to the financial institution or back office, eliminating manual data entry and reducing the number of times the data and image are transferred between parties. Easily interfaceable with existing banking software, such as internal risk management solutions, *A2iA Mobility* allows for permission-based functionality to be applied to each transaction, reducing fraud.

### **About *A2iA Mobility*<sup>™</sup>**

*A2iA Mobility*<sup>™</sup> is a patent-pending software development kit (SDK) available in multiple country- and language-versions for integration into mobile data capture and recognition applications, such as mobile remote deposit capture. A robust software with the ability to perform all image capture, cleanup and recognition on the native device, *A2iA Mobility* delivers application diversity by allowing users to broaden their mobile product offerings for applications such as account openings, bill pay, and payment processing.

**About A2iA**

[A2iA](http://www.a2ia.com), Artificial Intelligence and Image Analysis ([www.a2ia.com](http://www.a2ia.com)), is the worldwide leading developer of handwritten and machine printed text recognition, information extraction and intelligent document classification toolkits. By enhancing solutions from systems integrators and independent software vendors, A2iA allows complex and cursive data from all forms, documents and checks including unstructured handwritten letters, to become part of a structured database, making it searchable and reportable, with the same level of flexibility of printed or digital data. Proven to reduce costs and nearly eliminate data-entry and manual document processing, A2iA has been improving business process automation and delivering a visible ROI for over 20 years.
