A2iA to Showcase New Software at HIMSS15: First Toolkit on the Market to Recognize Full Text Printed and Cursive Handwriting, Without a Dictionary

Enable Interoperability and Better Analytics by Turning Patient Charts, Clinical Documentation, Lab Requisitions, EOBs and Forms into Searchable, Electronic Data

Chicago, IL, April 13, 2015 (HIMSS Booth #7369) – A2iA ([@A2iA](#)), the industry’s leading developer of specialized software tools that help users optimize their data capture, document processing and workflow automation capabilities, will showcase its newest product, [A2iA TextReader](#)[™], at HIMSS15 in Chicago, IL. Utilizing a new and unique RNN-based technology developed in-house by A2iA’s award-winning R&D Team, the same powerful engine can be used for printed and cursive text recognition, enabling all types of documents found within patient charts to be transformed into searchable and editable formats – without the use of a dictionary.

“As the healthcare industry moves closer towards electronic solutions, we know it is still heavily paper intensive, but we also know that IT systems are only as effective as the data in which they are provided,” said Jean-Louis Fages, A2iA President and Chairman of the Board. “This is where A2iA can make the biggest impact – by capitalizing on A2iA TextReader’s unique full text recognition features. The goal of value-based care will be seen by the provider and payor who can achieve better analytics, insight and intelligence, translating into improved patient outcomes.”

Fully integratable into a wide array of [healthcare applications](#), including those for Computer Assisted Coding (CAC), Electronic Medical Records (EMR), Explanation of Benefits (EOB) and Claims, A2iA’s software toolkits are proven to address the hybrid workflow and deliver tangible results. By automatically lifting and indexing printed and handwritten data from clinical documentation, patient charts, providers’ notes, lab requisitions and forms, A2iA is helping improve the exchange of information and creating actionable business intelligence, ultimately enhancing revenue cycles.

About A2iA

For more than 24 years, A2iA has been committed to the research and development of its handwriting recognition and document classification solutions to create more efficient ways for organizations to improve business intelligence. Available in 36-country versions and 7-languages, A2iA’s award-winning toolkits are trusted worldwide to streamline document workflows and reduce the need for data-entry throughout industries such as banking/finance, healthcare, insurance, government, and service bureaus/outsourcing firms. For more information, visit www.a2ia.com or call +1 917-237-0390 within the Americas, or +33 1 44 42 00 80 within EMEA or Asia.
