**A2iA Unveils New Version of A2iA Mobility that Recognizes  
all Passports & Visas from more than 230 Countries Around the World**

**Barcelona, Spain – Mobile World Congress, Hall 5 Stand 5B41, February 22, 2016 – A2iA (@A2iA)**, an award-winning developer of software for the worldwide data capture, document processing, and payment systems markets, announced the availability of its newest offline and client-side identity document recognition capabilities this week in Barcelona, Spain, at Mobile World Congress, Hall 5 Stand 5B41. [A2iA Mobility](#) supports the recognition of all International Travel Documents as defined by the ICAO specifications document 9303, including passports and visas from more than 230 countries from around the world, as well as U.S drivers’ licenses and French national identity cards (CNI). By automatically locating and extracting the personal identifying alpha and numeric data, merchants, corporations and governments ensure the correct information is provided to the validation and authentication solution without the need for manual keying or the risk for user manipulation prior to submission.

“It is becoming a global standard to require an identity document to perform all types of mobile transactions,” said Jean-Louis Fages, A2iA President & Chairman of the Board. “With the ability to automatically locate and extract data from IDs from around the world, *A2iA Mobility* can be integrated into applications with a global footprint, to help address compliance regulations and to aid in the verification of the user across territories and even across continents.”

In addition to ID documents, [A2iA Mobility](#) supports the automatic extraction of data from receipts, handwritten and printed fields from forms, and is the only mobile toolkit on the market to include check recognition support for the United States, Canada, and countries in Latin America, Europe and Asia Pacific. By combining its patented Auto-Locate™ feature with its offline functionality, *A2iA Mobility* delivers a quick and simple user experience, including the ability to automatically locate and capture a document from a video stream when it is found in focus. Available for integration into iOS and Android applications, software developers can customize the interface and experience for their specific users.

**About A2iA**

[A2iA](#), Artificial Intelligence and Image Analysis ([www.a2ia.com](http://www.a2ia.com)), is the worldwide leading developer of handwritten and machine printed text recognition, information extraction and intelligent document classification toolkits. By enhancing solutions from systems integrators and independent software vendors, A2iA allows complex and cursive data from all forms, documents and checks including unstructured handwritten letters, to become part of a structured database, making it searchable and reportable, with the same level of flexibility of printed or digital data.
