**Global Provider of Software and BPO Solutions to Integrate A2iA Mobility  
within New Mobile Offering for Remote Agents & Merchants in the Field**

*New mobile app to be offered as an alternative to traditional Remote Deposit Capture (RDC).*

**New York, December 10, 2013** – A2iA ([@A2iA](#)), an award-winning developer of software for the worldwide data capture, document processing, and payment systems markets, announced today that [A2iA Mobility™](#) has been integrated into a mobile remote deposit capture offering by a global provider of software and BPO (business process outsourcing) solutions. Planned for an initial deployment within North America, *A2iA Mobility*, a patent-pending software toolkit, will allow the solution provider to offer its clients an alternative to traditional remote deposit capture (RDC), and to enable its agents and merchants in the field the ability to process payments on-the-go, from anywhere, at any time.

“The need for mobile payment solutions expands beyond the retail banking market,” said Jean-Louis Fages, A2iA President & Chairman of the Board. “With *A2iA Mobility*’s offline capabilities, we are able to address this growing demand and deliver an alternative to those who work outside of a traditional office, and to those who do not always have a cellular or Wi-Fi connection.”

[A2iA Mobility](#) is available for integration into both Android and iOS apps, allowing software developers to customize the interface and experience for their specific users. Its client-side capabilities deliver all check usability, image analysis and data recognition features locally to the phone or tablet so that payments can be completed without a server. *A2iA Mobility*’s global footprint also allows for checks outside of the United States to be processed offline, expanding mobile payment capabilities to emerging markets.

**About A2iA**

[A2iA](#), Artificial Intelligence and Image Analysis ([www.a2ia.com](http://www.a2ia.com)), is the worldwide leading developer of specialized and highly intelligent software toolkits that help users optimize their data capture, document processing and workflow automation capabilities. Since its inception, A2iA has been a science-driven and research-based software developer and our products feature state-of-the-art and proprietary recognition technologies, including handwriting recognition, intelligent word and optical character recognition, and automatic classification engines, that address our customers’ complex data extraction and document processing needs. A2iA’s products are critical components that help drive information system accuracy, efficiency and ROI performance. Working closely with our end user customers and our worldwide network of system integrators, A2iA also ensures each solution makes fiscal sense and fits seamlessly within the information technology environment.
