***New A2iA Mobility Partnership Allows US-Based Financial Services Organization to Integrate A2iA's Offline Capabilities into their Mobile Remote Deposit Capture App***

**New York, December 3, 2013** – A2iA ([@A2iA](#)), an award-winning developer of software for the worldwide data capture, document processing, and payment systems markets, announced today that [A2iA Mobility™](#), its patent-pending software toolkit, has been integrated into a mobile remote deposit capture app for use by a leader in the financial services industry. With A2iA's ability to perform all check usability, image analysis and data recognition client-side on the phone or tablet, the process is quick and seamless for the user, reducing the number of times a check is sent from the device to the server, reducing the risk for fraud.

“We are very pleased to expand our reach within the US-mobile check processing market by partnering with a leader in the space,” said Jean-Louis Fages, A2iA President & Chairman of the Board. “This niche market continues to evolve and by integrating A2iA's offline capabilities, mobile apps can differentiate themselves by delivering convenient and secure ways for consumers to process payments at any time, from anywhere.”

[A2iA Mobility](#) is available for integration into both Android and iOS apps, allowing software developers to customize the interface and experience for their specific users. With a Global footprint, [A2iA Mobility](#) also allows for checks outside of the U.S.-locale to be processed offline, granting remote agents, merchants in the field, and consumers the ability to capture data while away from cellular service or a Wi-Fi zone.

**About A2iA**

[A2iA](#), Artificial Intelligence and Image Analysis ([www.a2ia.com](http://www.a2ia.com)), is the worldwide leading developer of specialized and highly intelligent software toolkits that help users optimize their data capture, document processing and workflow automation capabilities. Since its inception, A2iA has been a science-driven and research-based software developer and our products feature state-of-the-art and proprietary recognition technologies, including handwriting recognition, intelligent word and optical character recognition, and automatic classification engines, that address our customers' complex data extraction and document processing needs. A2iA's products are critical components that help drive information system accuracy, efficiency and ROI performance. Working closely with our end user customers and our worldwide network of system integrators, A2iA also ensures each solution makes fiscal sense and fits seamlessly within the information technology environment.
