New Release of A2iA Mobility Simplifies the User Experience with its ‘Auto-Locate’ Feature: Quickly Capture an Image without any User Interaction: No Bounding-Box or Pre-Defined Zone Required

New York, July 28, 2015 – A2iA ([@A2iA](#)), an award-winning developer of software for the worldwide data capture, document processing, and payment systems markets, released a new version of [A2iA Mobility](#)[™], its patented software toolkit dedicated to offline mobile data recognition and image analysis. Boasting its new Auto-Locate feature, *A2iA Mobility* V3.0 is further simplifying the user experience by allowing the user to capture an image of a document, check or ID without any interaction or pressing of the camera’s shutter button. By automatically detecting a document within a video stream and taking the photo, there is no bounding-box or pre-defined zone required – as long as the document is shown on the screen of the mobile device, *A2iA Mobility* will intelligently locate and capture the image.

“A2iA is helping to shape next-generation mobile solutions by changing the way image analysis and data extraction occurs - by bringing all of the intelligence directly to the handset and allowing for offline processing,” said Jean-Louis Fages, A2iA President & Chairman of the Board. “*A2iA Mobility*’s newest release continues to address these market trends, and delivers an even simpler user experience with intelligent automation.”

In addition to its new patent-pending Auto-Locate feature, [A2iA Mobility](#) V3.0 includes a new Australian country version to add to its global footprint. With deployments in North America, Latin America, and Europe, *A2iA Mobility*’s client-side capabilities are proven in solutions for corporations, remote agents, and consumers alike.

Applicable to various document types including checks, identification documents and other forms and documents, *A2iA Mobility* is available for integration into iOS 64-bit and Android apps, and performs all processes locally, without cellular service or Wi-Fi for real-time business operations with a simple user experience.

About A2iA

[A2iA](#), Artificial Intelligence and Image Analysis ([www.a2ia.com](#)), is the worldwide leading developer of handwritten and machine printed text recognition, information extraction and intelligent document classification toolkits. By enhancing solutions from systems integrators and independent software vendors, A2iA allows complex and cursive data from all forms, documents and checks including unstructured handwritten letters, to become part of a structured database, making it searchable and reportable, with the same level of flexibility of printed or digital data. A2iA has been improving business process automation and delivering a visible ROI for over 24 years.
