Newest Version of A2iA Mobility Expands its Global Footprint into the Canadian and Brazilian Mobile Check Processing Markets, and Allows for Document Processing Capabilities On-Device

New York, January 14, 2014 – A2iA ([@A2iA](#)), an award-winning developer of software for the worldwide data capture, document processing, and payment systems markets, released a new version of [A2iA Mobility](#)[™], its software toolkit dedicated to offline mobile data recognition and image analysis. This newest version expands *A2iA Mobility*'s Global footprint and allows mobile apps to process Canadian (English and French) and Brazilian checks, as well as to automatically locate a document captured by a phone or tablet, which the app can then send separately or with an accompanying document, check, or ID to the workflow. These client-side capabilities deliver a simple and seamless experience for the user while the merchant or financial institution sees a decrease in fraud and costs.

“A2iA has always dedicated itself to delivering software that speeds processes, minimizes manual document handling and reduces operating costs,” said Jean-Louis Fages, A2iA President & Chairman of the Board. “With the latest release of *A2iA Mobility*, we continue to deliver on these principles and allow for emerging mobile check and document processing markets to achieve the same successes we have seen in the U.S.”

Applicable to various document types including checks, identification documents and other forms and documents, [A2iA Mobility](#) is a patent-pending API that allows software developers to customize the mobile-specific user application and experience, as well as to enhance existing banking software such as risk management solutions or POS applications. Available for integration into both Android and iOS apps, *A2iA Mobility* performs all processes locally, without cellular service or Wi-Fi, and delivers capabilities for real-time business operations that reach beyond retail banking and outside of the traditional office.

About A2iA

[A2iA](#), Artificial Intelligence and Image Analysis (www.a2ia.com), is the worldwide leading developer of specialized and highly intelligent software toolkits that help users optimize their data capture, document processing and workflow automation capabilities. Since its inception, A2iA has been a science-driven and research-based software developer and our products feature state-of-the-art and proprietary recognition technologies, including handwriting recognition, intelligent word and optical character recognition, and automatic classification engines, that address our customers' complex data extraction and document processing needs. A2iA's products are critical components that help drive information system accuracy, efficiency and ROI performance. Working closely with our end user customers and our worldwide network of system integrators, A2iA also ensures each solution makes fiscal sense and fits seamlessly within the information technology environment.
